

Remotely Control and Manage Your Network

NTRAdmin extends your reach

Automate IT Tasks and Manage Your Network Remotely with NTRAdmin

What do you want to do?

- Automate tedious and periodic tasks so you can dedicate your time to strategic IT projects
- Deploy software, patches, and updates to your entire network remotely
- Get network and system status information on a single console
- Solve technical incidents remotely to minimize the need for desk-side visits

NTRAdmin is a comprehensive network management solution that equips you with all you need to easily control, monitor, and secure your hardware and software assets 24/7, wherever you may be. With Web-based and Pocket PC remote access, you can stay firmly in the driver's seat.

➤ Would you like more time to work on strategic IT projects?

NTRAdmin Bots are intelligent "robots" that you schedule to automatically carry-out individual IT tasks on one or more machines. NTRAdmin Bots may be used to automatically configure your network, streamline IT processes, and to manage network performance and security.

Once you begin scheduling and using bots, it's like having your own team of fast, efficient, and 100% reliable assistants who perform tasks that it would take you hours or even days to do manually. With Bots to manage the repetitive stuff, you can dedicate your time to meeting your strategic IT objectives.

➤ Can you imagine installing a patch to your entire network without leaving your workstation?

It's easy, actually. With the computers in your network set up for remote administration, it's as simple as selecting the patch, the machines on which to install it, and you're ready to go. You can schedule bandwidth-intensive tasks for off-hours to minimize the impact on company business.

➤ How would you like to spend less time on IT help desk incidents?

The help desk is a major challenge for any IT department. With NTRAdmin you can take remote control over any enabled Windows computer inside or outside of your company network. From the comfort of your workstation, you can respond immediately to urgent IT incidents to provide non-intrusive and fast technical support. You can limit desk-side visits to purely hardware-based issues and solve incidents faster, which means happier employees and more time for IT administration.

Centralize IT Management

- Deploy NTRadmin in minutes to an entire network, selected machines within the network, or even to assets outside your network
- Enable remote administration from the system administrator's desktop, with or without end-user intervention
- Manage your network from Pocket PC devices when travelling or after-hours
- Group your assets for intuitive management
- Delegate work to other administrators
- Apply advanced privacy controls
- View all asset information in a single, unified console
- Easily extend your network outside the LAN

Network Management

Monitor network and system performance using:

- Proactive system management
- Scans and reports
- Comprehensive asset inventory
- Message and alert center

Act to resolve problems using:

- Total remote control of computers in your network
- Unattended asset management

Keep your IT infrastructure secure:

- Use Bots for system backups, anti-virus confirmation, and patch installations
- Rest assured that your data is secured through regular platform-wide data backups and that all data transmissions use the 256-bit Rijndael AES algorithm

Automatic Task Administration

- Create NTRadmin Bots to perform individual IT tasks
- Group bots into comprehensive jobs

- Schedule Bots and jobs to run at optimal times and on a recurring basis
- Use pre-defined Bots available in the NTRadmin Bot Library
- Create your own Bots

File Management & Software Deployment

- Store installation and software files centrally
- Secure, drag-and-drop file transfer
- Deploy software on single machines, groups of machines or your entire network

NTRadmin Administrator Community

- Share ideas and resources with the online NTRadmin community of IT managers and system administrators
- Get one-click, instant access to expert technical support from NTRglobal
